

I have had digital dental x-ray in my clinic for several years, and loved it. Being a feline-exclusive clinic coupled with the fact that I use a portable x-ray machine and have a VERY small space for a radiology room, I thought that going digital for my standard x-rays was out of reach. After talking to my Digital Specialist, Matt Adkins, he encouraged me to try the ClearVet™ CR. By wall-mounting the unit it wouldn't take up much space, it would work with my existing x-ray machine, and was surprisingly much more affordable than I thought it would be. To help ease the transition and allow me to see how digital radiography would truly affect my practice, I chose to utilize the Apexx 7-Day Test Drive Program. The experience was stress free and simply put, they couldn't pry the ClearVet™ CR out of my hands at the end of test drive period.

In addition to the great system is probably the most overlooked aspect of the entire process, our Dedicated Digital Team. We know that customer service and support is only a phone call away. While Matt and J.D. were here installing the system and training us on how to use it, they utilized their expertise and fixed my digital dental x-ray system (which I didn't even purchase from Apexx!) so that I could show dental radiographs in the exam rooms also. THAT'S customer service!

The ClearVet CR and Apexx Veterinary equipment has undoubtedly changed my practice. The team at Apexx Veterinary Equipment has earned a customer for life.

E. Walker, DVM

Having contemplated the transition to digital radiography for three to four years, I decided it was time for my clinic to enhance the service it provides.

Working with apexx's Technology Division to buy my digital system has been one of the best business decisions I have made in my 35 year career. My digital specialist I worked with was courteous and knowledgeable. When they arrived onsite for installation training, it went much smoother than I anticipated. The Installation Manager, was professional and pleasant to work with.

Now that we have had our system for quite some time, it's easy to say that going digital was an excellent choice. We no longer spend our money on film and chemicals, and we are getting superior diagnostic information. The time savings alone has made the switch more than worthwhile. Our clients, technicians and patients are now more satisfied with the diagnostics we make available.

Purchasing my digital system from my company, PVP, was an added bonus because I know the service, support and long term commitment will always exist.

D. Holterman, DVM

Hi Nick - We absolutely LOVE our new system!!! The detail is incredible, and the ability to develop it immediately and then manipulate it on the screen is terrific - we couldn't be happier!

R. Gregory, DVM

Dear J.D., Nick, and the great people at Apexx,

We recently purchased a ClearVetCR machine from apexx to replace our old automatic processor, and we could not be happier. From the very first time that we contacted Apexx to the ongoing support that we receive, it has been a pleasant experience. The machine is everything (and more!) than we expected, and every time that we have a question, help is only a phone call or email away.

Our clients have been very excited about our new technology, and we are always happy to show it off to visiting veterinarians and other interested parties. The volume of radiographs that we take has increased a great deal already, and we have had clients come to see us for the first time because they heard that we have the new "digital" machine. The quality of the radiographs is a great deal better than film, and I believe that the quality of our medicine has gotten better as well as a result. We are much more willing to shoot a "quick radiograph," because we know that it actually will be quick!

We have had several how-to questions, and our service representative has always been very quick to respond and walk us through the process.

The doctors and staff at Medicine Valley Veterinary Hospital would like to thank you for your great service and products. We look forward to dealing with you in the future on more items from our wish lists!

Sincerely,

S. Krull, DVM and C. Daro, DVM
